EXPERIENCE

Security Engineer II

Feb 2026 – Present

Google

Hyderabad, IN

- Engineered core data-ingestion pipelines for an internal SSPM platform, integrating standard API scraping with AI-driven sandboxed browser agents to extract complex UI configurations, validating 1,000+ unmonitored settings across 20+ 3P SaaS applications.
- Engineered a Policy-as-Code auto-remediation pipeline to continuously detect configuration drift in SaaS instances and programmatically enforce desired system states, thus proactively preventing security misconfigs.
- Developed a Man-in-the-Middle cookie rotation and encryption pipeline for the corporate egress proxy, hardening network infrastructure against session hijacking vectors.
- Architected system controls and executed structural design reviews for distributed third-party application integrations in order to reduce third-party risk.

Security Analyst

Jul 2024 – Feb 2026

Google

Hyderabad, IN

- Managed and scaled infrastructure access controls supporting a global network of 180,000+ endpoints.
- Designed and deployed an LLM-driven triage engine in Python to analyze and automate resolution for 1,000+ tier-1 infrastructure requests, matching the processing throughput of a full-time engineer.
- Engineered automation pipelines in Go, Python, and SQL, successfully reducing manual system-exception processing by 60% and significantly increasing operational audit capacity.
- Evaluated architectural risk and security posture across 100+ external vendor systems, streamlining internal analysis workflows.

Software Engineer Intern

Jan 2024 – May 2024

Dell Technologies

Bengaluru, IN

- Architected an AI-powered semantic search engine utilizing vector databases and cosine-similarity retrieval, enabling sub-second queries across 500,000+ enterprise records.
- Trained and deployed a predictive deep neural network achieving 99% accuracy in supply chain delay detection following extensive exploratory data engineering.

Backend Developer Intern

Jan 2023 – Mar 2023

AutoProd Tech

Remote

- Optimized authentication, authorization, and transactional microservices, reducing API latency by 50%.
- Integrated GPT-driven content-generation APIs into the core scalable backend architecture.

TECHNICAL SKILLS

Languages:: Go, Python, SQL, C/C++, JavaScript, Bash

Software & Distributed Systems:: System Design, Microservices, Parallel Computing, CI/CD, Git, API Design

AI & Machine Learning:: LLM Application Architecture, Natural Language Processing, Vector Databases, Deep Learning

Cloud & Infrastructure:: Google Cloud Platform (GCP), PostgreSQL, Redis, MongoDB, Policy-as-Code

Security Architecture:: Endpoint Security, Threat Modeling, Device Hardening, Access Governance, Identity Pipelines

EDUCATION

Manipal University Jaipur

Jaipur, IN

B.Tech in Computer Science & Engineering, Minor in Cyber Security

Nov 2020 – July 2024

CERTIFICATIONS

Google Cloud Foundations — DeepLearning.AI Neural Networks — Cisco CCNA — Red Hat Linux System Administration (RH124/RH134)
